

Felix Teng documentation.

Hello documentation for tornjak project. So far I have done the quick start tutorial. It is actually kind of hard for me to get to work because for some reasons some days It will work really well and sometimes when I try to follow the instructions that are in the quick start it will not work. Just a couple of day ago I tried to follow some instructions and some commands that I was running the other days were not working. I figured it out actually because I needed to clone the directory again. I did not know I had to do this every single time I open up the tornjak. Even though some commands worked I still had problems with other commands and lines in the quick start. I could not do **cat tornjak-configmap.yaml** because for some reason it said that cat is not recognized as a internal or external command. I honestly still do not know how to fix it. I actually asked my group mates. None of them knew how to fix it. So Ive still been stuck on this part for a couple days. But I am going to get in touch with Miss Maia the tornjak IBM leader. Hopefully she can help me fix this because I really do not know how to get back past this step. Beside that I try to go to the online microsoft team meetings but I am kind of new to computers and programming so I have no idea actually what I am doing. But hopefully Miss Maia will help me figure it out. Inshallah by next status report next week I will have more commits.
